

UPCOMING TRAINING SEMINAR

TELECOM 101 - A 2018 Perspective

A special one-day seminar that will equip any Telecom employee with the essential knowledge of Telecom Fundamentals they require.

Presented by Incremona Communications

Finally, a Telecom 101 class without an over-emphasis on the “history lesson” portion or non-essentials! This is a refreshingly substantive (and relevant to the present) Telecom 101 Fundamentals course that all in the industry, both new and experienced alike, will greatly benefit from.

Like other courses of its type, it will cover the history of the Telco world from the beginning to the present - POTS, switching offices, LEC, CLEC, IXC, regulatory issues, analog versus digital, T-carrier, circuit switched bandwidth, SONET, Frame Relay, ATM, ISDN, early data networking and voice /data integration, LANs, Ethernet and LAN/WAN networking through Telecom Provider broadband circuits, IP Fundamentals, the Internet, VLANs, VOIP, SIP, Metro Ethernet, Home WIFI, etc.)

However, after establishing the beneficial historical information and technology/circuit understandings; the focus moves from those earlier technologies, networks and circuit types to which of those circuit types still exist, how are they being replaced, why and with what? What are the issues and technologies that are most important and applicable to the telecom industry today!

Throughout the course, it will clearly communicate the past and present world of a telecom service provider as it relates to voice/VOIP, data/IP and the Internet and IPTV. Also, what is OTT (Over the Top TV) and what are the various ways this impacts your company.

Lastly, it contrasts the present world of a telecom provider's circuits and services with those of their competitors! This class is geared for both technical and non-technical job titles.

Training Date & Location:

Tuesday, January 16, 2018

9:00 am – 5:00 pm

(Coffee and lunch will be provided)
